

VESSEL SAFETY GUIDE

provide us with your input!

Do you undertake, or aspire to provide, the following services during the development phase of offshore renewables project?

- Bird and marine mammal surveys
- Ship traffic monitoring
- Geotechnical or Geophysical surveys
- Installation of metmasts and metbuoys
- Crew transfer and service vessels

If you do, and you wish to contribute to improving Health and Safety Performance offshore, then The Crown Estate and Renewable UK wish to hear from you.

The Crown Estate and Renewable UK, are working with Det Norske Veritas (DNV) to produce a Vessel Safety Guide which aims to capture and describe good industry practice, for use during the development phase of offshore wind projects.

DNV are seeking initial industry input into the proposed content of this Guide by liaising with industry through a series of 1 day consultative workshops to be held during early July 2011. The purpose of these being to:

- Understand your first hand experiences of working offshore
- Hear your suggestions, and gather your recommendations, on how working conditions and safety should be improved
- Share good health and safety practice and
- Solicit your opinion as to where gaps in industry guidance and practice need to be filled

Attending will ensure that the Guide is developed using good industry practice and is user friendly.

Offshore renewable developers and other key stakeholders will attend.
